

# RO (Multi-Stage) Hydration Fill Station

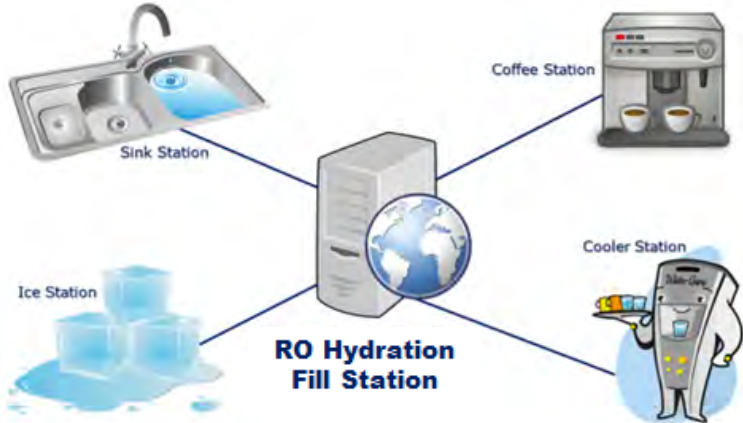

## RO Hydration Fill Station

- ◆ "Purified & conditioned" water that can feed one or multiple water device
- ◆ Multi-staged water purification with alkaline + electrolytes and antioxidants
- ◆ Centralized system to reduce filter sets, drain lines, pumps for more efficiency
- ◆ Endless output options: coolers, ice machines, coffee makers, facets and more
- ◆ Scalable for small and large capacity purified potable water configurations
- ◆ Perfect for manufacturing, cafeterias, coffee stations, gyms, and locations with long runs or minimal water source connections

# Combine (RO) Re-Mineralized Water To Virtually Any Dispensing Device

The Blue Marble Water (RO) Water Hydration Fill Station is a multi-stage purification system that delivers high quality water free of pathogens, dissolved solids, minerals, salts, and other impurities that are unhealthy, and results in lower hydration and poor tasting water. Our scalable fill station provides ultra-clean potable water on demand, eliminating the need for deliveries of bottled water in areas where there is no dedicated water sources and/or drains. Connect the RO (Multi-Stage) Hydration Fill Station to ice machines, coffee makers, hot/cold & sparkling water cooler shells, insta-hot devices, chillers and dedicated faucets.

**System Specifications Varies:**  
Each system is customized to each client's specific application, volume, and logistical needs.

- 💧 Hyper-Filtration to as low as .0001 micron (400 X's smaller than the smallest virus). Removes virtually all toxins and pathogens
- 💧 Pristine water connected to water coolers, coffee bars, ice makers, refrigerators, water fountains and more
- 💧 Reduces costly maintenance of expensive equipment, multiple filters sets and drain lines
- 💧 Scalable custom design-system can meet needs with a combination of filtration media, pumps, meters and dispensing ports
- 💧 No or very low energy needed and reduces waste water common with traditional RO units by over 50%
- 💧 Compact and customizable under-sink installation from 50 GPD to 887 GPD of purified water
